

Release 2.4.0 Release 4.3.0 This work igv.js 3.8.5

2x zoom in, median of five steps, one instrument belonging to neither tool. No arm made a network request on any step, so every difference is redraw and not fetch. Top: what the reader waits — igv.js never pays the multi-second zoom, so the outlier is the older JBrowse and not the web. This work's flat ~510 ms is the 500 ms navigation debounce and not work. Bottom: the draw burst alone, without the two older builds — they rasterize in a worker, where a page-side clock times the compositing blit rather than the rendering.
