

● marshall floor ● BGZF inflate ● BAM sequence decode ● BAM CIGAR decode
 ● BAM field decode ● BAM record walk ● BGZF block scan

a What a routine costs, and what moving its bytes costs

b The same, divided by the floor: the room a port has, and what one collected

(a) solid: the routine in JavaScript; dashed: the one shipped wasm port — @gmod/bgzf-filehandle's Rust/libdeflate inflate against its pako path.

(b) the same two divided by that floor, so solid is the ceiling it allows and dashed is what the port collected.

Minima over 21 repetitions on a loaded box — read the ratios, not the milliseconds.
